

Searching User Story

As a user of this web app, I want to search for certain concerts, view descriptions for them, and purchase tickets. When I come to the homepage of the web, I will see a search button on the top of the page. After clicking the search button, I will be brought to a new page, where I can see several searching options. On this page, I can enter a specific artist's name to search for his or her concerts, I can also pick multiple genres to search for concerts under these genres, or I can enter a zip code or city to look for concerts located in that location. Besides, I can also see a mini-calendar on the right side of the page, which allows me to select a date range that I want for concerts. What's more, below the mini-calendar, I will see a price filter, which helps me select the price range for concert tickets. After filling some of my search requests, I click the search button in the bottom of the page. This will bring me to a page, which shows a list of concerts that fulfill my requests. This page gives me the concert's name, artists' names, date, location, and minimum tickets' price for each concert. Also, beside each concert's name, there will be a purchasing button (refer to the "Purchasing" user story).
