

## **Homepage User Story**

As a user of this web application, I want to be able to see a display of options when I am directed to the homepage of the web application. On the top of the homepage, I will see a menu bar, which includes a search button which will redirect me to the “Searching” user story, and login/signup button which will redirect me to the “Login” or “Signup” user story. On the homepage, I will see a Welcome message with a brief greeting along with a button that will direct me to a page of concerts. If I see a concert that I am interested in I will be redirected to a page which shows the details of the concert. If I try to purchase tickets, I will be redirected to the Ticketmaster website.

As a logged-in user, I am able to edit my music preferences when I click on the Profile button at the top of the Homepage. On the Homepage, I still I am also able to click a button to set my preferences, a button to connect to my Spotify account, and a button to see my recommendations.

I am able to see a list of popular concerts within my location radius based on the default location in my profile when I click on the recommendations button. If I see a concert I am interested in and try to purchase tickets, I will be redirected to the “Purchasing” user story.

## **Profile User Story (secondary story)**

As a logged-in user, I will see a “Profile” button in the menu bar. By pressing the button from the Homepage, I will be able to access my Profile. In the “Profiles” story, I am able to edit my account information (such as username, first name, last name, and email address) and reset my password. I am also able to edit my music preferences such as my preferred genre and location. There is also the option to connect my Spotify account via my account’s username.

## **“Setting up Music Preference” (secondary story)**

At the Homepage, I will see a button that will allow me to set my preference. At this page, I am asked to input a city and select a genre preference, but both of them are optional.

## **“Connecting to Spotify” (secondary story)**

At the Homepage, I will see a button to inform me that I have the option to link my Spotify account to the web app. If I click the “Connect” button, I will be asked to fill in my Spotify username. If I don’t want to connect to my Spotify account I can ignore this feature.
