Homepage User Story

As a user of this web application, I want to be able to see a display of options when I am directed to the homepage of the web application. On the top of the homepage, I will see a menu bar, which includes search button which will redirect me to the "Searching" user story, and login / signup button which will redirect me to the "Login" or "Signup" user story. If I am not a logged-in user (and do not have a default location), I expect to see a list of the most popular concerts in the world at that moment. If I see a concert that I am interested in and try to purchase tickets, I will be redirected to the "Login" page.

As a logged-in user, I am able to see a list of popular concerts within my location radius based on the default location in my profile (on the main page). If I see a concert I am interested in and try to purchase tickets, I will be redirected to the "Purchasing" user story. From the main page, I will also be able to access the "Searching" user story. In addition, I will have the option of redirecting myself to the ""Purchasing" user story. In addition, I will also be able to see a list of recommended concerts just for me.

Profile User Story (secondary story)

As a logged-in user, I will see a "Profile" button in the menu bar. By pressing the button, I will be able to access my Profile which will redirect me to the "Profiles" user story (which is a secondary story). In the "Profiles" story, I am able to edit my account information (such as name, email address, and location). I am also able to edit my preferences when it comes to artists and genres I am interested in. Under this "Profiles" story, I will also be able to view all past concerts I have attended (given that I purchased tickets through the web application for the attended concerts).
